STELLAR DUST

Cosmic tapestry carrying light through space

The Stellar Dust lighting is composed of countless speckles that seem to float through space. This collection was originally designed for J&T bank in Prague by CMC architects, and designers Václav Mlynář and Jakub Pollág. Its success resulted in this design being adopted for regular production, as an addition to the BOMMA Constellations. Both optical illusions and the remarkable effects of these crystal components perfectly juxtapose modern interiors. The neutral clear color and universal round shape add to its versatility.
